Augmented Reality (AR) and Virtual Reality (VR) are becoming part of our daily life and have great potential to enhance the safety of built environments when affected by disasters. With this seminar, Dr Lovreglio will provide an overview of how VR and AR can be used to investigate human behavior and training people for several emergencies situations.

**Topics:**

Virtual Reality to investigate Human Behaviour  
Virtual Reality to train people  
Augmented Reality for Evacuation

# Augmented Reality and Virtual Reality for Human Behaviour in Disasters
